QUARTERLY RETURN

OF THE

# MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE

IRISH FREE STATE, BY PROVINCES, COUNTIES, AND SUPERINTENDENT REGISTRARS' DISTRICTS.

WITH

Certain Detailed Information Relative to the Deaths in Superintendent Registrars'
Districts and in Urban Districts: Persons Vaccinated, &c., &c., &c.

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from Messrs. EASON & SON, Ltd., 40-41 Lower Sackville Street, Dublin:

Price Sixpence Net.

Marriages:-OCT., NOV., DEC., 1923.

Births and Deaths: - JANUARY, FEBRUARY, MARCH, 1924.

OIFIG UM CHLÁRÚ GHENEREÁLTA,

TIGH CHARLEMONT,

BAILE ATHA CLIATH.

During the quarter ended 31st March last, there were registered in Saorstát Eireann, comprising 649 Registrars' Districts 15,950 Births, equivalent to an annual rate of 20·2 per 1,000 of the estimated population, and 14,544 Deaths, affording an annual rate of 18·4 per 1,000 of the estimated population in the middle of 1924, viz., 3,161,000 persons. It should be borne in mind that the information regarding Births and Deaths contained in this Report, based on numerical returns furnished by the Registrars, is unrevised. The Annual Report for 1924 will supply the revised figures.

In England and Wales for the quarter, the Births registered numbered 185,486, being equal to an annual rate of 19.4 per 1,000 of the population, the Deaths amounting to 160,279, affording a rate of 16.7 per 1,000.

## MARRIAGES.

The number of Marriages registered in Saorstát Éireann during the fourth quarter of 1923 was 3,368, equivalent to an annual rate of 4·3 per 1,000 of the estimated population, this rate being 0·2 above that for the corresponding quarter of 1922, and equal to the average for the fourth quarter of the preceding ten years. Of the total number of marriages, 3,110 (or 4·4 per 1,000 of the estimated Roman Catholic population) were those of Roman Catholics, and 258 related to persons belonging to all other denominations, representing 3·1 per 1,000 of the population other than Roman Catholics. The marriage rate among Roman Catholics is equal to, and that relating to all other denominations is 1·0 below, the average for the fourth quarter of the ten years 1913-22.

# BIRTHS.

Of the Births registered (15,950) during the quarter ended 31st March, last, 8,338 were boys and 7,612 girls, the total being equivalent to an annual rate of  $20\cdot2$  per 1,000 of the estimated population. This rate is  $0\cdot3$  below the average for the first quarter of the preceding ten years, but  $1\cdot0$  above that for the first quarter of 1923.

# DEATHS.

The Deaths registered during the quarter, numbering 14,544, of which 7,193 were of males and 7,351 of females, are equivalent to an annual rate of 18.4 per 1,000 of the population, being 0.3 under the average for the first quarter of the preceding decennium, but 3.5 above that for the first quarter of the year 1923.

# CAUSES OF DEATH.

The following statement gives particulars regarding Deaths registered in the Free State from the undermentioned causes for the first quarter of 1924, and for each of the eight preceding quarters, also averages for the first quarter of the five years, 1919-23.

|  |   |  | 0000                                  | Dea        | aths f   | rom   | Princi   | pal E <sub>I</sub>                              | piden                                 | nic Di   | seases.  |  | Deaths<br>Tubero<br>Disea   | ulous  | fr   | aths<br>om<br>acer.                                  |

### AGES AT DEATH.

Of the 14,544 deaths registered during the quarter, 1,378, or 9.5 per cent., were those of infants under one year of age; and 6,781, or 46.6 per cent., were of persons aged 65 years and upwards. The number of deaths of infants was equivalent to 86 per 1,000 births registered as compared with 63, 60, and 68, for the three preceding quarters.

# INQUESTS.

There were 192 Inquests reported to the Registrars during the quarter, this number being equal to one in every 76 of the total deaths registered.

# DEATHS IN PUBLIC INSTITUTIONS.

Of the 14,544 deaths registered, 3,317, or 22.8 per cent., occurred in public institutions.

# UNCERTIFIED DEATHS.

The Returns furnished by the Registrars show that 4,043, or 27.8 per cent of the 14,544 deaths registered during the quarter, were uncertified, there having been no medical attendant during the last illness.

# VACCINATION.

As returned by the Registrars the number of Successful Primary Vaccinations during the quarter ended 31st March last was 6,108.

# PARTICULARS OF URBAN DISTRICTS.

# INCLUDING

QUARTERLY SUMMARY OF THE WEEKLY RETURNS OF BIRTHS AND DEATHS IN TWELVE OF THE PRINCIPAL TOWN DISTRICTS.

Table II., page 9, gives separate information for the Urban Districts. This table also includes a summary of 12 principal town districts, derived from Table I., of the Weekly Returns. It will be observed from Table II that the birth-rate relating to the quarter under review for the entire urban districts, which contain twenty-seven per cent. of the population of the Free State, was  $24\cdot2$  per 1,000 of the population, and that the birth-rate for the remainder of the Free State was  $18\cdot6$  per 1,000.

The annual rate represented by the deaths from all causes for these urban areas during the quarter was  $21\cdot2$  per 1,000 of the population, and for the remainder of the Free State the corresponding rate was  $17\cdot3$  per 1,000.

The urban mortality from the principal epidemic diseases\* recorded during the quarter was equivalent to an annual rate of  $1\cdot 1$  per 1,000 of the population of the urban districts, the death-rate from these diseases for the remainder of the Free State being  $0\cdot 3$  per 1,000 of the population.

# TWELVE PRINCIPAL TOWN DISTRICTS.

As shown in Table II, the annual rate, represented by the deaths from all causes registered during last quarter in the Dublin Registration Area and eleven of the principal urban areas of the Free State (exclusive of deaths in public institutions of persons admitted from without the districts), was 21·8 per 1,000 of the population, the respective rates for the several districts being as follows, ranging in order from the lowest to the highest: Dundalk, 15·5; Galway, 16·0; Wexford, 16·6; Clonmel, 18·0; Sligo, 18·3; Limerick, 18·4; Drogheda, 18·9; Dublin Registration Area, 22·4; Tralee, 22·9; Cork, 23·0; Waterford, 23·0; and Kilkenny, 30·8.

The annual rate represented by the deaths from the principal epidemic diseases\* in the 12 districts was 1·1 per 1,000 of the population, the rates varying from 0·0 in Sligo to 3·9 in Tralee, the 59 deaths from all causes for that district including 5 from whooping cough and 5 from diarrhœal diseases. The 441 deaths from all causes for Cork include 37 from whooping-cough, 4 from diphtheria and 2 from diarrhœa and enteritis of children under 2 years of age.

<sup>\*</sup> Enteric fever, typhus, small pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhœal diseases.

Pulmonary Tuberculosis.—The annual rate represented by the deaths from pulmonary tuberculosis for the 12 towns in the aggregate was  $1\cdot60$  per 1,000 of the estimated population; for the Dublin Registration Area it was  $1\cdot69$  per 1,000; and for the remaining eleven town districts collectively it was  $1\cdot43$ .

# DUBLIN REGISTRATION AREA

BIRTHS.—In the Dublin Registration Area, which consists of the City of Dublin, and the Urban districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dun Laoghaire, the total number of births registered during the thirteen weeks ended Saturday, 29th March, 1924, was 2,937—1,504 boys and 1,433 girls—being equal to an annual rate of 27·0 in every 1,000 of the population.

The births recorded for the City numbered 2,172, equivalent to an annual rate of  $26\cdot 1$  in every 1,000 of the population; and for the urban districts named above, 534, equal to an annual rate of  $20\cdot 9$  in every 1,000 of the population. Hence during the quarter, the births in the Dublin Registration Area (exclusive of 231 in institutions relating to residents of outside localities) amounted to 2,706, affording an annual rate of  $24\cdot 9$  per 1,000.

Deaths.—Omitting the deaths (185) referred to localities outside the Dublin Registration Area, the deaths for the Area, numbering 2,437, were equivalent to an annual rate of 22·4 per 1,000 of the estimated population, the average rate for the corresponding period of the previous 10 years being 23·2. The total number of deaths registered in the Dublin Registration Area during the quarter was 2,622—1,202 males and 1,420 females—affording an annual ratio of 24·1 in every 1,000 of the estimated population as compared with 24·9 per 1,000 for the first quarter of the ten years, 1914-1923.

The number of deaths of inhabitants\* of the city of Dublin was 1,947, equivalent to a rate of 23·4 per 1,000. For the urban districts the number was 490, being equal to an annual death-rate of 19·2 in every 1,000.

The following statement shows the number of deaths from some of the principal causes recorded for the Dublin Registration Area during the quarter (13 weeks) ended 29th March, 1924, as compared with the average for the first quarter of the five years 1919 23.

| Causes of Death.   | Deaths,<br>1st Quarter,<br>1924. | Averages,<br>1st Quarter,<br>1919-23. |
|--------------------|----------------------------------|---------------------------------------|
| Enteric Fever      | 4                                | 2                                     |
| Typhus             | 12                               |                                       |
| Smallpox           | TOWN OR SELECT                   |                                       |
| Measles            | 43                               | 28                                    |
| Scarlet Fever      | 1                                | 6                                     |
| Whooping-cough     | 6                                | 24                                    |
| Diphtheria         | 16                               | 12                                    |
| Diarrhœal Diseases | 33                               | 36                                    |
| Influenza          | 251                              | 179                                   |
| Tuberculosis       | 233                              | 292                                   |

From Table III. page 12, it will be seen that the annual rate represented by the mortality from the principal epidemic diseases† in the Dublin Registration Area was 0.9 per 1,000, that in the City it was 1.1, and in the urban districts, 0.4, the rates for the several districts varying from 0.0 in Clontarf and Howth No. 1, part of, to 2.2 in North City No. 1 E, the 222 deaths from all causes for that district including 8 from measles, one from whooping-cough, 2 from diphtheria, and 7 from diarrhœal diseases.

<sup>\*</sup> The death-rates referring to the several Dublin districts have been calculated on the mortality for the respective districts as corrected by the distribution of deaths in public institutions according to the localities from which the deceased persons were admitted (Table III).

† See note (\*) on page 3.

AGES.—Of the 2,437 deaths of persons belonging to the Dublin Registration Area during the quarter, 666 were under five years of age, including 370 infants under one year of age the latter representing a rate of 137 per 1,000 births registered. The number of deaths of children under 5 years of age is equal to an annual mortality of 59.6 in every 1,000 children at that age, the deaths of persons between the ages of 5 and 15 representing an annual rate of 2.6 per 1,000 persons at that age period; those between the ages of 15 and 25 were equivalent to an annual rate of 5.6 per 1,000, the total number under 25 years being equal to an annual mortality of 15.8 per 1,000 of the population at that age period; for those between 25 and 45 the rate was 8.7; for those between 45 and 65 it was 35.5; among persons between 65 and 75 the rate was 86.5, and among those aged 75 and upwards the average annual death rate was 224.3 per 1,000. The deaths of 14 persons (2 males and 11 females) aged 90 years and upwards were registered.

Public Institutions.—Of the 2,437 deaths recorded during the quarter, 831 or 34·1 per cent., occurred in public institutions, viz., 526 in the various hospitals, prisons, and lunatic asylums, 294 in the Dublin Union Workhouse, and 11 (those of persons admitted from within the Dublin Registration Area) in the Rathdown Union Workhouse.

# ENGLAND AND SCOTLAND.

During the thirteen weeks ended 29th March 1924, the births in London were equivalent to a rate of 19.8 per 1,000 of the population; in Glasgow the birthrate was 25.1 per 1,000, and in Edinburgh 20.9 per 1,000.

The deaths among civilians in London during the same period were equivalent to an annual rate of mortality of 17.8 in every 1,000 of the civil population; in Glasgow the death-rate was 22.4 per 1,000 of the total population, and in Edinburgh the annual rate was 16.1 per 1,000.

# METEOROLOGY.

The mean temperature for thirteen weeks ended 29th March, 1924, deduced from the mean weekly temperature as returned from the Ordinance Survey Office, Phœnix Park, Dublin, was  $40.8^{\circ}$ ; at Cork (Roche's Point) it was  $44.1^{\circ}$ ; at Greenwich  $39.8^{\circ}$ ; at Glasgow,  $39.1^{\circ}$ ; and at Edinburgh,  $38.7^{\circ}$ .

The mean daily number of hours of bright sunshine recorded at Dublin was  $2\cdot 2$ ; at Cork (Ballinacurra),  $2\cdot 4$ ; at Greenwich,  $2\cdot 4$ ; at Glasgow,  $1\cdot 5$ , and at Edinburgh,  $2\cdot 4$ .

The rainfall at Dublin during the thirteen weeks measured 4.92 inches; at Cork (Roche's Point) it was 10.39 inches; at Greenwich it was 4.60 inches; at Glasgow, 6.01 inches, and at Edinburgh, 4.09 inches.

The following information has been kindly furnished by the Director of the Meteorological Office, London:—

# JANUARY, 1924.

The weather of January was warm, wet, and unsettled.

The week ending on the 26th was the warmest of the month. The lowest screen temperatures occurred generally on the 14th. The maximum temperature of 59°F registered at Dublin (Phœnix Park) on the 21st was the highest reading observed during the month at any station in the British Isles. Except during the first week, rainfall was above normal. In the South-east, in an area which embraced the counties of Wicklow, Waterford and Carlow the rainfall was about twice the normal. The largest total fall of any station in the British Isles, viz. 253mm occurred at Newtownbarry (Wexford). The rainfall in the Suir Valley was very heavy during the fortnight ending on the 19th while the flood at Clonmel rose to the level of the 1840 flood, and at Carrick-on-Suir almost to the 1855 level. Winds were mainly south-easterly, gales occurring about the 8th. Snow fell generally on the night of the 8-9th. Ground frosts occurred most frequently during the week ending on the 12th.

# FEBRUARY, 1924.

February was a dull and very dry month. The first week of the month was the warmest and at most stations maximum temperatures over 50°F were registered. The lowest screen temperatures occurred between the 14th and 17th. High southerly winds and gales occurred on the 8th accompanied by heavy falls of rain at several stations. Some of the largest amounts were 60 mm at Valencia, 48 mm at Cork and 37 mm at Roches Point. Ground frosts occurred frequently at several stations. Winds were mainly between west and north-east and were light. The week ending on the 23rd was the sunniest, the duration of sunshine being above normal. During the other weeks, it was below normal.

# MARCH, 1924.

Cold dry weather with a short mild period extending from about the 22nd to the 26th, characterised the month of March, The first week of the month was the coldest, the lowest screen minima occurring on the 2nd or 3rd, and the second, the warmest. The highest day temperatures were registered at the middle of the month, at some stations, and at others between the 23rd and 26th. Ground frosts were numerous. Rainfall was remarkably light, being less than half the normal at the majority of stations. Winds were mainly between east and south, and mostly light, except on the south coast where moderate to stronger winds were also frequent. The second week was the sunniest and the last week the dullest. Snow fell at the beginning and end of the month.

Table A—Showing the Mean Weekly Values and the difference from their Normal Values of the Meteorological Elements at the Phœnix Park, Dublin, for the thirteen weeks ended March 29th, 1924.

† See note (†) on page 7.

‡ The information given for Belfast and Londonderry has been kindly furnished by the Registrar-General for Northern Ireland and relates to the thirteen weeks ended 29th March, 1924. The birth and death rates are based on the estimated population in the middle of 1924.

See note (4) on page 9,

TABLE III .- Showing for the Quarter (13 weeks) ended 29th March, 1924, the number of Dearns of Residents of the several Registrans' Districts in the Dublin Registration AREA, and in the City of Cork: the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases; with the Mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths; the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

Marriages:—JANUARY, FEBRUARY, MARCH, 1924. Births and Deaths:—APRIL, MAY, JUNE, 1924.

OIFIG UM CHLÁRÚ GHENEREÁLTA, TIGH CHARLEMONT,

BAILE ÁTHA CLIATH.

During the quarter ended 30th June last, there were registered in Saorstát Eireann, comprising 649 Registrars' Districts, 16,610 Births, equivalent to an annual rate of 21·0 per 1,000 of the estimated population, and 11,961 Deaths, affording an annual rate of 15·1 per 1,000 of the estimated population in the middle of 1924, viz., 3,161,000 persons. It should be borne in mind that the information regarding Births and Deaths contained in this Report, based on numerical returns furnished by the Registrars, is unrevised. The Annual Report for 1924 will supply the revised figures.

In England and Wales for the quarter, the Births registered numbered 187,157, being equal to an annual rate of 19.5 per 1,000 of the population, the Deaths amounting to 114,176, affording a rate of 11.9 per 1,000.

# MARRIAGES.

The number of Marriages registered in Saorstát Éireann during the first quarter of 1924 was 4,418, equivalent to an annual rate of 5.6 per 1,000 of the estimated population, this rate being 0.3 above that for the corresponding quarter of 1923, and 0.3 below the average for the first quarter of the preceding ten years. Of the total number of marriages, 4,241 (or 6.0 per 1,000 of the estimated Roman Catholic population) were those of Roman Catholics, and 177 related to persons belonging to all other denominations, representing 2.1 per 1,000 of the population other than Roman Catholics. The marriage rate among Roman Catholics is 0.2 below, and that relating to all other denominations is 1.6 below, the average for the first quarter of the ten years 1914-23.

# BIRTHS.

Of the Births registered (16,610) during the quarter ended 30th June, last, 8,575 were boys and 8,035 girls, the total being equivalent to an annual rate of  $21 \cdot 0$  per 1,000 of the estimated population. This rate is 0.4 below the average for the second quarter of the preceding ten years, but 0.5 above that for the second quarter of 1923.

# DEATHS.

The Deaths registered during the quarter, numbering 11,961, of which 6,084 were of males and 5,877 of females, are equivalent to an annual rate of  $15\cdot 1$  per 1,000 of the population, being  $1\cdot 4$  under the average for the second quarter of the preceding decennium, but  $0\cdot 7$  above that for the second quarter of the year 1923.

# CAUSES OF DEATH.

The following statement gives particulars regarding Deaths registered in the Free State from the undermentioned causes for the second quarter of 1924, and for each of the eight preceding quarters, also averages for the second quarter of the five years, 1919-23.

# AGES AT DEATH.

Of the 11,961 deaths registered during the quarter, 1,150, or 9.6 per cent., were those of infants under one year of age; and 5,280, or 44.1 per cent., were of persons aged 65 years and upwards. The number of deaths of infants was equivalent to 69 per 1,000 births registered as compared with 60, 68, and 86, for the three preceding quarters.

# INQUESTS.

There were 159 Inquests reported to the Registrars during the quarter, this number being equal to one in every 75 of the total deaths registered.

# DEATHS IN PUBLIC INSTITUTIONS.

Of the 11,961 deaths registered, 2,763, or 23:1 per cent., occurred in public institutions.

# UNCERTIFIED DEATHS.

The Returns furnished by the Registrars show that 3,522, or 29.4 per cent of the 11,961 deaths registered during the quarter, were uncertified, there having been no medical attendant during the last illness.

# VACCINATION.

As returned by the Registrars the number of Successful Primary Vaccinations during the quarter ended 30th June last was 16,921.

# PARTICULARS OF URBAN DISTRICTS,

# INCLUDING

QUARTERLY SUMMARY OF THE WEEKLY RETURNS OF BIRTHS AND DEATHS IN TWELVE OF THE PRINCIPAL TOWN DISTRICTS.

Table II., page 33, gives separate information for the Urban Districts. This table also includes a summary of 12 principal town districts, derived from Table I., of the Weekly Returns. It will be observed from Table II that the birth-rate relating to the quarter under review for the entire urban districts, which contain twenty-seven per cent. of the population of the Free State, was 25.0 per 1,000 of the population, and that the birth-rate for the remainder of the Free State was 19.5 per 1,000.

The annual rate represented by the deaths from all causes for these urban areas during the quarter was 15.0 per 1,000 of the population, and for the remainder of the Free State the corresponding rate was 15.2 per 1,000.

The urban mortality from the principal epidemic diseases\* recorded during the quarter was equivalent to an annual rate of  $1\cdot0$  per 1,000 of the population of the urban districts, the death-rate from these diseases for the remainder of the Free State being  $0\cdot5$  per 1,000 of the population.

# TWELVE PRINCIPAL TOWN DISTRICTS.

As shown in Table II, the annual rate, represented by the deaths from all causes registered during last quarter in the Dublin Registration Area and eleven of the principal urban areas of the Free State (exclusive of deaths in public institutions of persons admitted from without the districts), was 15·1 per 1,000 of the population, the respective rates for the several districts being as follows, ranging in order from the lowest to the highest: Tralee, 10·5; Sligo, 10·7; Limerick, 13·7; Drogheda, 13·8; Waterford, 14·1; Clonmel, 14·1; Dublin Registration Area, 14·2; Dundalk, 15·2; Wexford, 17·0; Galway, 18·1; Kilkenny, 20·5; and Cork, 21·3.

The annual rate represented by the deaths from the principal epidemic diseases\* in the 12 districts was 1·1 per 1,000 of the population, the rates varying from 0·0 in three of the districts to 2·4 in Cork, the 408 deaths from all causes for that district including 2 from enteric fever, 38 from whooping cough, 4 from diphtheria and 2 from diarrhœa and enteritis of children under 2 years of age.

<sup>\*</sup> Enteric fever, typhus, small pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery. and diarrhœal diseases.

PULMONARY TUBERCULOSIS.—The annual rate represented by the deaths from pulmonary tuberculosis for the 12 towns in the aggregate was 1.77 per 1,000 of the estimated population; for the Dublin Registration Area it was 1.49 per 1,000; and for the remaining eleven town districts collectively it was 2.30.

# DUBLIN REGISTRATION AREA.

BIRTHS.—In the Dublin Registration Area, which consists of the City of Dublin, and the Urban districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dun Laoghaire, the total number of births registered during the thirteen weeks ended Saturday, 28th June, 1924, was 3,063—1,562 boys and 1,501 girls—being equal to an annual rate of 28·2 in every 1,000 of the population.

The births recorded for the City numbered 2,358, equivalent to an annual rate of 28·3 in every 1,000 of the population; and for the urban districts named above, 484, equal to an annual rate of 19·0 in every 1,000 of the population. Hence during the quarter, the births in the Dublin Registration Area (exclusive of 221 in institutions relating to residents of outside localities) amounted to 2,842, affording an annual rate of 26·1 per 1,000.

Deaths.—Omitting the deaths (201) referred to localities outside the Dublin Registration Area, the deaths for the Area, numbering 1,545, were equivalent to an annual rate of 14·2 per 1,000 of the estimated population, the average rate for the corresponding period of the previous 10 years being 19·1. The total number of deaths registered in the Dublin Registration Area during the quarter was 1,746—889 males and 857 females—affording an annual ratio of 16·1 in every 1,000 of the estimated population as compared with 20·8 per 1,000 for the first quarter of the ten years, 1914-1923.

The number of deaths of inhabitants\* of the city of Dublin was 1,199, equivalent to a rate of 14·4 per 1,000. For the urban districts the number was 346, being equal to an annual death-rate of 13·6 in every 1,000.

The following statement shows the number of deaths from some of the principal causes recorded for the Dublin Registration Area during the quarter (13 weeks) ended 28th June, 1924, as compared with the average for the second quarter of the five years 1919-23.

| Causes of          | Death. |       |       | Deaths,<br>2nd Quarter,<br>1924. | Averages,<br>2nd Quarter,<br>1919-23. |

| Enteric Fever      |        | • • • | • • • | 2                                | 3                                     |
| Typhus             | •••    |       |       |                                  | 1                                     |
| Smallpox           |        |       | •••   |                                  |                                       |
| Measles            | •••    | • • • |       | 66                               | 33                                    |
| Scarlet Fever      |        | •••   |       | 7                                | 4                                     |
| Whooping-cough     | •••    | ***   |       | 2                                | 44                                    |
| Diphtheria         |        | •••   |       | 10                               | 8                                     |
| Diarrhœal Diseases |        |       |       | 34                               | 38                                    |
| Influenza          |        | •••   |       | . 27                             | 49                                    |
| Tuberculosis       |        | • • • |       | 189                              | 260                                   |

From Table III. page 36, it will be seen that the annual rate represented by the mortality from the principal epidemic diseases in the Dublin Registration Area was 1·1 per 1,000, that in the City it was 1·3, and in the urban districts, 0·5, the rates for the several districts varying from 0·0 in three of the districts to 2·2 in North City No. 1 E, the 155 deaths from all causes for that district including 15 from measles, and 3 from diarrhea and enteritis of children under 2 years.

<sup>\*</sup> The death-rates referring to the several Dublin districts have been calculated on the mortality for the respective districts as corrected by the distribution of deaths in public institutions according to the localities from which the deceased persons were admitted (Table III).

† See note (\*) on page 27.

AGES.—Of the 1,545 deaths of persons belonging to the Dublin Registration Area registered during the quarter, 400 were under five years of age, including 255 infants under one year of age, the latter representing a rate of 90 per 1,000 births registered. The number of deaths of children under 5 years of age is equal to an annual mortality of 35.8 in every 1,000 children at that age, the deaths of persons between the ages of 5 and 15 representing an annual rate of 2.9 per 1,000 persons at that age period; those between the ages of 15 and 25 were equivalent to an annual rate of 3.7 per 1,000, the total number under 25 years being equal to an annual mortality of 10.3 per 1,000 of the population at that age period; for those between 25 and 45 the rate was 6.0; for those between 45 and 65 it was 24.3; among persons between 65 and 75 the rate was 48.2, and among those aged 75 and upwards the annual death rate was 123.3 per 1,000. The deaths of 11 persons (all females) aged 90 years and upwards were registered.

Public Institutions.—Of the 1,545 deaths recorded during the quarter, 642 or 41.6 per cent., occurred in public institutions, viz., 461 in the various hospitals, prisons, and lunatic asylums, 179 in the Dublin Union Workhouse, and 2 (those of persons admitted from within the Dublin Registration Area) in the Rathdown Union Workhouse.

# ENGLAND AND SCOTLAND.

During the thirteen weeks ended 28th June, 1924, the births in London were equivalent to a rate of 19.5 per 1,000 of the population; in Glasgow the birthrate was 25.7 per 1,000, and in Edinburgh 20.4 per 1,000.

The deaths among civilians in London during the same period were equivalent to an annual rate of mortality of 10·7 in every 1,000 of the civil population; in Glasgow the death-rate was 15·4 per 1,000 of the total population, and in Edinburgh the annual rate was 14·6 per 1,000.

# METEOROLOGY.

The mean temperature for thirteen weeks ended 28th June, 1924, deduced from the mean weekly temperature as returned from the Ordinance Survey Office, Phœnix Park, Dublin, was  $49.5^{\circ}$ ; at Cork (Roche's Point) it was  $50.7^{\circ}$ ; at Greenwich  $54.3^{\circ}$ ; at Glasgow,  $49.0^{\circ}$ ; and at Edinburgh,  $47.7^{\circ}$ .

The mean daily number of hours of bright sunshine recorded at Dublin was  $4\cdot4$ ; at Cork (Ballinacurra),  $4\cdot9$ ; at Greenwich,  $5\cdot2$ ; at Glasgow,  $4\cdot7$ , and at Edinburgh,  $5\cdot0$ .

The rainfall at Dublin during the thirteen weeks measured 8·11 inches; at Cork (Roche's Point) it was 10·35 inches; at Greenwich it was 8·03 inches: at Glasgow, 8·99 inches, and at Edinburgh, 7·27 inches.

The following information has been kindly furnished by the Director of the Meteorological Office, London:—

### APRIL.

The weather of April was generally cloudy and cool but there were bright periods. The first few days were sunny with an almost complete absence of precipitation, but cool northerly winds prevailed and temperature was much below normal. The week April 6th to 12th was also cool, with moderate rainfall and sunshine. Subsequently the weather was cool with abundant sunshine but the week 20th to 26th had an excess of temperature with heavy rain and little sunshine. The mean temperature of the month was about  $1.5^{\circ}F$  below normal, rainfall was in excess, save in parts of the extreme south and west, and sunshine was appreciably deficient.

# MAY.

The weather of May was generally wet and rather dull. The first week was the coolest, the last week the warmest, the mean temperature of the month being approximately normal. The 29th was the warmest day generally and temperatures of 72°F were registered at several stations. Rainfall was everywhere markedly in excess and all stations reported 22 or more days of rainfall, about double the number for April. Sunshine was generally deficient, notably at Dublin, but Birr Castle had an appreciable excess. The week 11th to 17th was the sunniest. There was some thunder and a considerable amount of hail.

# JUNE.

The mean temperature of the month was approximately normal. The 23rd to 25th were the warmest days in most places and on the 23rd a maximum temperature of 75°F was registered at Kilkenny and at Newcastle. Sunshine was markedly deficient everywhere throughout the whole month and at Cahirciveen the mean daily duration of sunshine was barely 50% of the normal. Rainfall was in considerable excess and was particularly heavy during the week 15th to 21st: over a large area in the south-west it exceeded 150% of the normal. From one to three days of thunder were experienced, this being most prevelant on the 17th.

† See note (†) on page 33. ‡ The information given for Belfast and Londonderry has been kindly furnished by the Registrar-General for Northern Ireland and relates to the thirteen weeks ended 28th June, 1924. The birth and death rates are based on the estimated population in the middle of 1924.

† See note (†) on page \$3.

TABLE III. -Showing for the Quarter (13 weeks) ended 28th June, 1924, the number of DEATHS of Residents of the several Registrans' Districts in the Dublin Registration AREA, and in the City of Cork: the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases; with the Mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths; the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

Marriages:—APRIL, MAY, JUNE, 1924.

Births and Deaths :- JULY, AUGUST, SEPTEMBER, 1924.

OIFIG UM CHLÁRÚ GHENEREÁLTA, TIGH CHARLEMONT,

BAILE ÁTHA CLIATH.

During the quarter ended 30th September last, there were registered in Saorstát Éireann, comprising 649 Registrars' Districts, 16,381 Births, equivalent to an annual rate of 20·7 per 1,000 of the estimated population, and 8,946 Deaths, affording an annual rate of 11·3 per 1,000 of the estimated population in the middle of 1924, viz., 3,161,000 persons. It should be borne in mind that the information regarding Births and Deaths contained in this Report, based on numerical returns furnished by the Registrars, is unrevised. The Annual Report for 1924 will supply the revised figures.

In England and Wales for the quarter, the Births registered numbered 186,648 being equal to an annual rate of 19·3 per 1,000 of the population, the Deaths amounting to 90,155, affording a rate of 9·3 per 1,000.

#### MARRIAGES.

The number of Marriages registered in Saorstát Éireann during the second quarter of 1924 was 3,393, equivalent to an annual rate of 4·3 per 1,000 of the estimated population, this rate being 1·0 below that for the corresponding quarter of 1923, and 0·5 below the average for the second quarter of the preceding ten years. Of the total number of marriages, 3,146 (or 4·4 per 1,000 of the estimated Roman Catholic population) were those of Roman Catholics, and 247 related to persons belonging to all other denominations, representing 3·0 per 1,000 of the population other than Roman Catholics. The marriage rate among Roman Catholics is 0·4 below, and that relating to all other denominations is 1·5 below, the average for the second quarter of the ten years 1914-23.

#### BIRTHS.

Of the Births registered (16,381) during the quarter ended 30th September last, 8,435 were boys and 7,946 girls, the total being equivalent to an annual rate of 20.7 per 1,000 of the estimated population. This rate is 1.0 above the average for the third quarter of the preceding ten years, and 1.2 above that for the third quarter of 1923.

#### DEATHS.

The Deaths registered during the quarter, numbering 8,946, of which 4,648 were of males and 4,298 of females, are equivalent to an annual rate of  $11\cdot3$  per 1,000 of the population, being  $1\cdot0$  under the average for the third quarter of the preceding decennium, but  $0\cdot3$  above that for the third quarter of the year 1923.

#### CAUSES OF DEATH.

The following statement gives particulars regarding Deaths registered in Saorstát Éireann from the undermentioned causes for the third quarter of 1924, and for each of the eight preceding quarters, also averages for the third quarter of the five years, 1919-23.

#### AGES AT DEATH.

Of the 8,946 deaths registered during the quarter, 981, or 11·0 per cent., were those of infants under one year of age; and 3,715, or 41·5 per cent., were of persons aged 65 years and upwards. The number of deaths of infants was equivalent to 60 per 1,000 births registered as compared with 68, 86, and 69, for the three preceding quarters.

#### INQUESTS.

There were 151 Inquests reported to the Registrars during the quarter, this number being equal to one in every 59 of the total deaths registered.

#### DEATHS IN PUBLIC INSTITUTIONS.

Of the 8,946 deaths registered, 2,131, or 23.8 per cent., occurred in public institutions.

#### UNCERTIFIED DEATHS.

The Returns furnished by the Registrars show that 2,456, or 27.5 per cent. of the 8,946 deaths registered during the quarter, were uncertified, there having been no medical attendant during the last illness.

#### VACCINATION.

As returned by the Registrars the number of Successful Primary Vaccinations during the quarter ended 30th September last was 16,295.

#### PARTICULARS OF URBAN DISTRICTS.

#### INCLUDING

QUARTERLY SUMMARY OF THE WEEKLY RETURNS OF BIRTHS AND DEATHS IN TWELVE OF THE PRINCIPAL TOWN DISTRICTS.

Table II., page 57, gives separate information for the Urban Districts. This table also includes a summary of 12 principal town districts, derived from Table I., of the Weekly Returns. It will be observed from Table II. that the birth-rate relating to the quarter under review for the entire urban districts, which contain 27 per cent. of the population of Saorstat Éireann, was 26.3 per 1,000 of the population, and that the birth-rate for the remainder of the Free State was 18.6 per 1,000.

The annual rate represented by the deaths from all causes for these urban areas during the quarter was 11.7 per 1,000 of the population, and for the remainder of the Free State the corresponding rate was 11.2 per 1,000.

The urban mortality from the principal epidemic diseases \* recorded during the quarter was equivalent to an annual rate of 0.9 per 1,000 of the population of the urban districts, the death-rate from these diseases for the remainder of the Free State being 0.4 per 1,000 of the population.

#### TWELVE PRINCIPAL TOWN DISTRICTS.

As shown in Table II., the annual rate, represented by the deaths from all causes registered during last quarter in the Dublin Registration Area and eleven of the principal urban areas of Saorstát Éireann (exclusive of deaths in public institutions of persons admitted from without the districts), was 11.9 per 1,000 of the population, the respective rates for the several districts being as follows, ranging in order from the lowest to the highest: Clonmel, 7.8; Wexford, 8.0; Sligo, 9.3; Dundalk, 9.8; Tralee, 10.1; Limerick, 11.3; Galway, 11.5; Drogheda, 11.8; Dublin Registration Area, 12.0; Waterford, 12.1; Cork, 13.6; and Kilkenny, 14.8.

The annual rate represented by the deaths from the principal epidemic diseases\* in the 12 districts was 1·0 per 1,000 of the population, the rates varying from 0·0 in two of the districts to 1·9 in Tralee, the 26 deaths from all causes for that district including 2 from enteric fever, and 3 from diarrhœa and enteritis of children under 2 years of age.

<sup>\*</sup> Enteric fever, typhus, small pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

PULMONARY TUBERCULOSIS.—The annual rate represented by the deaths from pulmonary tuberculosis for the 12 towns in the aggregate was 1·34 per 1,000 of the estimated population; for the Dublin Registration Area it was 1·17 per 1,000 (the rate for Dublin City being 1·26 per 1,000), and for the remaining eleven town districts collectively it was 1·67.

#### DUBLIN REGISTRATION AREA.

BIRTHS.—In the Dublin Registration Area, which consists of the City of Dublin, and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dun Laoghaire, the total number of births registered during the thirteen weeks ended Saturday, 27th September, 1924, was 3,241—1,653 boys and 1,588 girls—being equal to an annual rate of 29·8 in every 1,000 of the population.

The births recorded for the City numbered 2,448, equivalent to an annual rate of 29.4 in every 1,000 of the population; and for the Urban districts named above, 582, equal to an annual rate of 22.8 in every 1,000 of the population. Hence during the quarter, the births in the Dublin Registration Area (exclusive of 211 in institutions relating to residents of outside localities) amounted to 3,030, affording an annual rate of 27.9 per 1,000.

Deaths.—Omitting the deaths (151) referred to localities outside the Dublin Registration Area, the deaths for the Area, numbering 1,305, were equivalent to an annual rate of 12·0 per 1,000 of the estimated population, the average rate for the corresponding period of the previous 10 years being 15·4. The total number of deaths registered in the Dublin Registration Area during the quarter was 1,456—753 males and 703 females—affording an annual ratio of 13·4 in every 1,000 of the estimated population as compared with 16·7 per 1,000 for the third quarter of the ten years, 1914-1923.

The number of deaths of inhabitants\* of the city of Dublin was 1,016, equivalent to a rate of  $12\cdot2$  per 1,000. For the urban districts the number was 289, being equal to an annual death-rate of  $11\cdot3$  in every 1,000.

The following statement shows the number of deaths from some of the principal causes recorded for the Dublin Registration Area during the quarter (13 weeks) ended 27th September, 1924, as compared with the average for the third quarter of the five years 1919-23.

| Causes of          | Deatl | 1.  |       | Deaths,<br>3rd Quarter,<br>1924. | Averages,<br>3rd Quarter,<br>1919-23. |
|--------------------|-------|-----|-------|----------------------------------|---------------------------------------|
| Enteric Fever      | •••   |     | • • • | *                                | 3                                     |
| Typhus             | •••   | ••• | •••   |                                  |                                       |

| Diphtheria         | * * * | *** |       | 7                                | 6                                     |
| Diarrhœal Diseases |       | ••• |       | 110                              | 151                                   |
| Influenza          | •••   | ••• |       | 2                                | 6                                     |
| Tuberculosis       | ***   | *** | •••   | 164                              | 200                                   |

From Table III., page 60, it will be seen that the annual rate represented by the mortality from the principal epidemic diseases† in the Dublin Registration Area was  $1\cdot2$  per 1,000, that in the City it was  $1\cdot3$ , and in the urban districts,  $0\cdot8$ , the rates for the several districts varying from  $0\cdot0$  in two of the districts to  $2\cdot8$  in North City No. 2, the 100 deaths from all causes for that district including 21 from diarrhæa and enteritis of children under 2 years.

<sup>\*</sup> The death-rates referring to the several Dublin districts have been calculated on the mortality for the respective districts as corrected by the distribution of deaths in public institutions according to the localities from which the deceased persons were admitted (Table III).

† See note (\*) on page 51.

AGES.—Of the 1,305 deaths of persons belonging to the Dublin Registration Area registered during the quarter, 376 were under five years of age, including 291 infants under one year of age, the latter representing a rate of 96 per 1,000 births registered. The number of deaths of children under 5 years of age is equal to an annual mortality of 33·6 in every 1,000 children at that age, the deaths of persons between the ages of 5 and 15 representing an annual rate of 2·3 per 1,000 persons at that age period; those between the ages of 15 and 25 were equivalent to an annual rate of 3·6 per 1,000, the total number under 25 years being equal to an annual mortality of 9·5 per 1,000 of the population at that age period; for those between 25 and 45 the rate was 4·7; for those between 45 and 65 it was 20·1; among persons between 65 and 75 the rate was 40·0, and among those aged 75 and upwards the annual death-rate was 89·2 per 1,000. The deaths of 7 persons (2 males and 5 females) aged 90 years and upwards were registered.

Public Institutions.—Of the 1,305 deaths recorded during the quarter, 569 or 43.6 per cent., occurred in public institutions, viz., 404 in the various hospitals, prisons, and lunatic asylums, 157 in the Dublin Union Workhouse, and 8 (those of persons admitted from within the Dublin Registration Area) in the Rathdown Union Workhouse.

#### ENGLAND AND SCOTLAND.

During the thirteen weeks ended 27th September, 1924, the births in London were equivalent to a rate of 19·3 per 1,000 of the population; in Glasgow the birth rate was 23·8 per 1,000, and in Edinburgh 20·6 per 1,000.

The deaths among civilians in London during the same period were equivalent to an annual rate of mortality of 8.6 in every 1,000 of the civil population; in Glasgow the death-rate was 11.4 per 1,000 of the total population, and in Edinburgh the annual rate was 12.2 per 1,000.

#### METEOROLOGY.

The mean temperature for thirteen weeks ended 27th September, 1924, deduced from the mean weekly temperature as returned from the Ordinance Survey Office, Phœnix Park, Dublin, was  $56\cdot1^{\circ}$ ; at Peamount Sanatorium it was  $56\cdot4^{\circ}$ ; at Cork (Roche's Point) it was  $56\cdot8^{\circ}$ ; at Greenwich,  $61\cdot0^{\circ}$ ; at Glasgow,  $55\cdot3^{\circ}$ ; and at Edinburgh,  $55\cdot1^{\circ}$ .

The mean daily number of hours of bright sunshine recorded at Dublin was 4.5; at Cork (Ballinacurra), 4.7; at Greenwich, 5.7; at Glasgow, 3.8, and at Edinburgh, 4.5

The rainfall at Dublin during the thirteen weeks measured 11.85 inches; at Peamount Sanatorium it was 12.16 inches; at Cork (Roche's Point) it was 10.94 inches; at Greenwich, it was 8.50 inches; at Glasgow, 11.31 inches, and at Edinburgh, 9.79 inches.

The following information has been kindly furnished by the Director of the

Meteorological Office, London:-

#### JULY.

Heavy rains were general during the month. Thunderstorms were widespread on the 3rd and 4th. A spell of fine warm weather set in on the 9th and temperature rose gradually. The highest temperatures of the year were recorded towards the middle of the month; 75° F. was recorded at Dublin City on the 15th. From the 17th onwards the weather was cool and unsettled. The mean temperature was about a degree below normal, rainfall in considerable excess and sunshine appreciably deficient.

#### AUGUST.

The weather was mainly cool and unsettled with westerly winds. A spell of bright weather was experienced from the 6th to the 10th. From the 11th till the end of the month the weather was unsettled and rain fell repeatedly. A maximum temperature of 71° F. was recorded at Newcastle (Wicklow) on the 4th. The mean temperature was about a degree below normal. Rainfall was approximately normal in the south and somewhat in excess in the north. There was a considerable deficiency of sunshine.

#### SEPTEMBER.

Unsettled weather, with heavy rain at times, but with bright intervals, prevailed throughout the greater part of the month. Heavy rains were general between the 6th and 8th. Gales occurred on the night of the 20th to 21st. Fair weather was experienced after the 25th, but on the evening of the 28th heavy rain again fell. A maximum temperature of 73° F. was recorded at Killarney on the 2nd. The mean temperature was about a degree below normal. Precipitation was in great excess (at Birr Castle and Waterford nearly three times the normal) and sunshine was markedly deficient.

Table A—Showing the Mean Weekly Values and the difference from their Normal Values of the Meteorological Elements at the Phœnix Park, Dublin, for the thirteen weeks ended September 27th, 1924.

† See note (†) on page 57. ‡ The information given for Belfast and Londonderry has been kindly furnished by the Registrar-General for Northern Ireland and relates to the thirteen weeks ended 27th September, 1924. The birth and death rates are based on the estimated population in the middle of 1924.

Table III.—Showing for the Quarter (13 weeks) ended 27th September, 1924, the number of Dearns of Residents of the several Recistrants' Districts in the Dublin Recistration of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases;

with the Mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths; the Deaths in Public Institutions being assigned

to the Districts from which the deceased were admitted

### QUARTERLY RETURN

OF THE

# MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN

SAORSTÁT ÉIREANN BY PROVINCES, COUNTIES, AND SUPERINTENDENT REGISTRARS' DISTRICTS.

WITH

Certain Detailed Information Relative to the Deaths in Superintendent Registrars' Districts and in Urban Districts: Persons Vaccinated, &c., &c., &c.

[Incorporated in this Report is the yearly Summary of the Weekly Returns (pp. 97-105).]

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from Messrs. EASON & SON, Ltd., 40-41 Lower Sackville Street, Dublin:

Price One Shilling Net.

Marriages:-JULY, AUGUST, SEPTEMBER, 1924.

Births and Deaths: —OCT., NOV., DEC., 1924.

OIFIG UM CHLÁRÚ GHENEREÁLTA,

TIGH CHARLEMONT,

BAILE ATHA CLIATH.

During the quarter ended 31st December last, there were registered in Saorstát Éireann, comprising 649 Registrars' Districts, 14,533 Births, equivalent to an annual rate of 18·4 per 1,000 of the estimated population, and 9,913 Deaths, affording an annual rate of 12·5 per 1,000 of the estimated population in the middle of 1924, viz., 3,161,000 persons. It should be borne in mind that the information regarding Births and Deaths contained in this Report, based on numerical returns furnished by the Registrars, is unrevised. The Annual Report for 1924 will supply the revised figures.

In England and Wales for the quarter, the Births registered numbered 170,995 being equal to an annual rate of 17.5 per 1,000 of the population, the Deaths amount-

ing to 108,660, affording a rate of 11·1 per 1,000.

### MARRIAGES.

The number of Marriages registered in Saorstát Éireann during the third quarter of 1924 was 3,618, equivalent to an annual rate of 4.6 per 1,000 of the estimated population, this rate being 0.5 below that for the corresponding quarter of 1923, and 0.2 below the average for the third quarter of the preceding ten years. Of the total number of marriages, 3,321 (or 4.7 per 1,000 of the estimated Roman Catholic population) were those of Roman Catholics, and 297 related to persons belonging to all other denominations, representing 3.6 per 1,000 of the population other than Roman Catholics. The marriage rate among Roman Catholics is 0.1 below, and that relating to all other denominations is 1.4 below, the average for the third quarter of the ten years 1914-23.

### BIRTHS.

Of the Births registered (14,533) during the quarter ended 31st December last, 7,440 were boys and 7,093 girls, the total being equivalent to an annual rate of 18.4 per 1,000 of the estimated population. This rate is 0.1 below the average for the fourth quarter of the preceding ten years, and 0.2 below that for the fourth quarter of 1923.

### DEATHS.

The Deaths registered during the quarter, numbering 9,913, of which 5,025 were of males and 4,888 of females, are equivalent to an annual rate of 12.5 per 1,000 of the population, being 2.2 below the average for the fourth quarter of the preceding decennium, and 0.4 below that for the fourth quarter of the year 1923.

### CAUSES OF DEATH.

The following statement gives particulars regarding Deaths registered in Saorstát Éireann from the undermentioned causes for the fourth quarter of 1924, and for each of the eight preceding quarters, also averages for the fourth quarter of the five years, 1919-23.

### AGES AT DEATH.

Of the 9,913 deaths registered during the quarter, 1,013, or 10·2 per cent. were those of infants under one year of age; and 4,376, or 44·1 per cent., were of persons aged 65 years and upwards. The number of deaths of infants was equivalent to 70 per 1,000 births registered as compared with 86, 69, and 60, for the three preceding quarters.

### INQUESTS.

There were 149 Inquests reported to the Registrars during the quarter, this number being equal to one in every 67 of the total deaths registered.

### DEATHS IN PUBLIC INSTITUTIONS.

Of the 9,913 deaths registered, 2,330 or 23.5 per cent., occurred in public institutions.

### UNCERTIFIED DEATHS.

The Returns furnished by the Registrars show that 2,738, or 27.6 per cent. of the 9,913 deaths registered during the quarter, were uncertified, there having been no medical attendant during the last illness.

### VACCINATION.

As returned by the Registrars the number of Successful Primary Vaccinations during the quarter ended 31st December last was 8,641.

### PARTICULARS OF URBAN DISTRICTS,

### INCLUDING

QUARTERLY SUMMARY OF THE WEEKLY RETURNS OF BIRTHS AND DEATHS IN TWELVE OF THE PRINCIPAL TOWN DISTRICTS.

Table II., page 81, gives separate information for the Urban Districts. This table also includes a summary of 12 principal town districts, derived from Table I., of the Weekly Returns. It will be observed from Table II. that the birth-rate relating to the quarter under review for the entire urban districts which contain 27 per cent. of the population of Saorstat Éireann, was 23.6 per 1,000 of the population, and that the birth-rate for the remainder of Saorstat Éireann was 16.4 per 1,000.

The annual rate represented by the deaths from all causes for these urban areas during the quarter was 14.3 per 1,000 of the population, and for the remainder of Saorstát Éireann the corresponding rate was 11.9 per 1,000.

The urban mortality from the principal epidemic diseases\* recorded during the quarter was equivalent to an annual rate of 0.9 per 1,000 of the population of the urban districts, the death-rate from these diseases for the remainder of Saorstát Éireann being 0.3 per 1,000 of the population.

### TWELVE PRINCIPAL TOWN DISTRICTS.

As shown in Table II., the annual rate represented by the deaths from all causes registered during last quarter in the Dublin Registration area and eleven of the principal urban areas of Saorstát Éireann (exclusive of deaths in public institutions of persons admitted from without the districts), was 14·2 per 1,000 of the population, the respective rates for the several districts being as follows, ranging in order from the lowest to the highest: Wexford, 10·0; Clonmel, 10·9; Waterford, 11·0; Tralee, 11·6; Dundalk, 12·8; Sligo, 13·0; Cork, 13·4; Galway, 14·0; Dublin Registration Area, 14·5; Drogheda, 15·2; Limerick, 15·4; and Kilkenny, 23·4.

The annual rate represented by the deaths from the principal epidemic diseases\* in the 12 districts was 0.9 per 1,000 of the population, the rates varying from 0.3 in Cork to 2.5 in Tralee, the 32 deaths from all causes for that district including 4 from enteric fever, and 3 from diarrhœal diseases.

<sup>\*</sup> Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhocal diseases.

PULMONARY TUBERCULOSIS.—The annual rate represented by the deaths from pulmonary tuberculosis for the 12 towns in the aggregate was 1·31 per 1,000 of the estimated population; for the Dublin Registration Area it was 1·21 per 1,000 (the rate for Dublin City being 1·36 per 1,000), and for the remaining eleven town districts collectively it was 1·50.

### DUBLIN REGISTRATION AREA.

BIRTHS.—In the Dublin Registration Area, which consists of the City of Dublin, and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dun Laoghaire, the total number of births registered during the fourteen weeks ended Saturday, 3rd January, 1925, was 2,925—1,497 boys and 1,428 girls—being equal

to an annual rate of 25.0 in every 1,000 of the population.

The births recorded for the City numbered 2,209, equivalent to an annual rate of 24.7 in every 1,000 of the population; and for the Urban districts named above, 502, equal to an annual rate of 18.3 in every 1,000 of the population. Hence during the quarter, the births in the Dublin Registration Area (exclusive of 214 in institutions relating to residents of outside localities) amounted to 2,711, affording an annual rate of 23.2 per 1,000.

Deaths.—Omitting the deaths (172) referred to localities outside the Dublin Registration Area, the deaths for the Area, numbering 1,697, were equivalent to an annual rate of 14·5 per 1,000 of the estimated population, the average rate for the corresponding period of the previous 10 years being 19·1. The total number of deaths registered in the Dublin Registration Area during the quarter was 1,869—937 males and 932 females—affording an annual ratio of 16·0 in every 1,000 of the estimated population as compared with 20·4 per 1,000 for the fourth quarter of the ten years, 1914-1923.

The number of deaths of inhabitants\* of the City of Dublin was 1,320, equivalent to a rate of 14.8 per 1,000. For the urban districts the number was 377, being equal

to an annual death-rate of 13.8 in every 1,000.

The following statement shows the number of deaths from some of the principal causes recorded for the Dublin Registration Area during the quarter (14 weeks) ended 3rd January, 1925, as compared with the average for the fourth quarter of the five years 1919-23.

| Caus          | ses of Deat | h.  |       | Deaths,<br>4th Quarter,<br>1924. | Averages,<br>4th Quarter,<br>1919-23. |

| Influenza     | *** ***     | ••• |       | 14                               | 18                                    |
| Tuberculosis  | •••         | ••• |       | 176                              | 202                                   |

From Table III., page 84, it will be seen that the annual rate represented by the mortality from the principal epidemic diesases† in the Dublin Registration Area was 0.9 per 1,000, that in the City it was 1.0, and in the Urban districts, 0.6, the rates for the several districts varying from 0.0 in Clontarf and Howth No. 1 District, part of, to 1.9 in each of North City No. 1 East and North City No. 1 West, the 142 deaths for the former including one from scarlet fever, one from whooping cough, 2 from diphtheria and 12 from diarrhœal diseases, while the 205 deaths for the latter include one from whooping cough, 3 from diphtheria and 18 from diarrhœal diseases.

<sup>\*</sup> The death-rates referring to the several Lublin districts have been calculated on the mortality for the respective districts as corrected by the distribution of deaths in public institutions according to the localities from which the deceased persons were admitted (Table III).

† See note (\*) on page 75.

AGES.—Of the 1,697 deaths of persons belonging to the Dublin Registration Area registered during the quarter, 478 were under five years of age, including 365 infants under one year of age, the latter representing a rate of 135 per 1,000 births registered. The number of deaths of children under 5 years of age is equal to an annual mortality of 39·8 in every 1,000 children at that age, the deaths of persons between the ages of 5 and 15 representing an annual rate of 1·8 per 1,000 persons at that age period; those between the age of 15 and 25 were equivalent to an annual rate of 4·3 per 1,000, the total number under 25 years being equal to an annual mortality of 10·7 per 1,000 of the population at that age period; for those between 25 and 45 the rate was 5·5; for those between 45 and 65 it was 25·1; among persons between 65 and 75 the rate was 50·1, and among those aged 75 and upwards the annual death-rate was 119·7 per 1,000. The deaths of 14 persons (2 males and 12 females) aged 90 years and upwards were registered.

Public Institutions.—Of the 1,697 deaths recorded during the quarter, 697 or 41·1 per cent., occurred in public institutions, viz., 494 in the various hospitals, prisons, and lunatic asylums, 197 in the Dublin Union Workhouse, and 6 (those of persons admitted from within the Dublin Registration Area) in the Rathdown Union Workhouse.

### ENGLAND AND SCOTLAND.

During the fourteen weeks ended 3rd January, 1925, the births in London were equivalent to a rate of 17.6 per 1,000 of the population; in Glasgow the birth rate was 22.6 per 1,000, and in Edinburgh 19.0 per 1,000.

The deaths among civilians in London during the same period were equivalent to an annual rate of mortality of  $11\cdot 1$  in every 1,000 of the civil population; in Glasgow the death-rate was  $14\cdot 7$  per 1,000 of the total population, and in Edinburgh the annual rate was  $15\cdot 5$  per 1,000.

### METEOROLOGY.

The mean temperature for fourteen weeks ended 3rd January, 1925, deduced from the mean weekly temperature as returned from the Ordinance Survey Office, Phœnix Park, Dublin, was  $46\cdot6^{\circ}$ ; at Peamount Sanatorium it was  $47\cdot3^{\circ}$ ; at Cork (Roche's Point) it was  $49\cdot3^{\circ}$ ; at Greenwich,  $47\cdot4^{\circ}$ ; at Glasgow,  $46\cdot0^{\circ}$ ; and at Edinburgh,  $45\cdot5^{\circ}$ .

The mean daily number of hours of bright sunshine recorded at Dublin was  $2\cdot3$ ; at Cork (Ballinacurra),  $1\cdot8$ ; at Greenwich,  $1\cdot8$ ; at Glasgow,  $1\cdot3$ , and at Edinburgh,  $2\cdot3$ .

The rainfall at Dublin during the fourteen weeks measured 9.84 inches; at Peamount Sanatorium (for thirteen weeks) it was 9.49 inches; at Cork (Roche's Point) it was 20.98 inches; at Greenwich, it was 10.71 inches; at Glasgow, 14.05 inches, and at Edinburgh, 8.83 inches.

The following information has been kindly furnished by the Director of the Meteorological Office, London:—

### OCTOBER.

Unsettled conditions with winds mainly between south and south-west prevailed generally throughout the month except for a few periods of fine weather between the 11th and 15th and the 22nd and 24th. The mean temperature exceeded 1° F. above the normal, but there was a considerable deficiency of sunshine. Rainfall was slightly below normal.

### NOVEMBER.

Unsettled conditions continued during the first two days, but were succeeded by fair weather with northerly winds and frosts inland. Mild, unsettled conditions were subsequently renewed. During the last ten days strong winds and frequent rain were experienced. There was a gale in the south on the 26th-27th. The mean temperature was over 2°F. above normal, rainfall about normal, and sunshine in considerable deficiency.

### DECEMBER.

Warm and unsettled conditions again characterised the month. There were frequent strong winds or gales in the second half of the month, particularly during the last week. A gust of 70 m.p.h. was recorded at Weaver Point, Cork, on the 27th. The mean temperature was about 4°F above the normal, rainfall in marked excess and sunshine slightly above normal.

Table A—Showing the Mean Weekly Values and the differences from their Normal Values of the Meteorological Elements at the Phoenix Park, Dublin, for the fourteen Weeks ended January 3rd, 1925.

### YEAR 1924.

# PARTICULARS OF URBAN DISTRICTS FOR THE YEAR 1924,

INCLUDING THE

## YEARLY SUMMARY OF THE WEEKLY RETURNS OF BIRTHS AND DEATHS

IN THE

### DUBLIN REGISTRATION AREA,

AND IN

ELEVEN OF THE PRINCIPAL TOWNS IN SAORSTAT ÉIREANN.

Table 1, page 100, gives separate information for the urban districts. This table also includes a summary of 12 principal town districts, derived from Table I of the Weekly Returns. It will be observed that the rate represented by the number of births recorded for the entire urban districts during the year 1924 was 24.8 per 1,000 of the population and for the rural districts 18.3 per 1,000, the birth rate for Saorstát Éireann being 20·1 per 1,000.

In the urban districts the death-rate from all causes was 15.6 per 1,000. In the remaining districts the death-rate was 13.9, the death-rate for all Saorstát

Eireann being 14.4 per 1,000.

For the principal epidemic\* diseases in 1924, the rate in the urban districts was 1.0 per 1,000 and in the rural districts 0.4 per 1,000, the rate for Saorstát Éireann

as a whole being 0.5 per 1,000.

The infant mortality rate for the urban districts, based on the births and deaths of infants under one year of age, recorded for the year 1924, as returned by the Registrars, was 102 per 1,000 births, the rate for the rural districts being only 55 per 1,000. In the whole of Saorstát Éireann the rate was equivalent to 71 per 1,000 births registered.

### TWELVE PRINCIPAL TOWN DISTRICTS.

MORTALITY FROM ALL CAUSES.—As shown in Table I. the rate, represented by the deaths from all causes registered during the year in the Dublin Registration Area and eleven of the principal urban areas of Saorstát Éireann (exclusive of deaths in public institutions of persons admitted from without the districts), was 15.8 per 1,000 of the population, the respective rates for the several districts being as follows, ranging in order from the lowest to the highest:—Clonmel, 12.7; Wexford, 12.9; Sligo, 12.9; Dundalk, 13.3; Tralee, 13.8; Limerick, 14.7; Galway, 14.9; Waterford, 15.0; Drogheda, 15.0; Dublin Registration Area, 15.8; Cork, 17.8; and Kilkenny, 22.5.

PRINCIPAL EPIDEMIC DISEASES.—The annual rate represented by the deaths from the principal epidemic diseases\* in the 12 districts was 1.0 per 1,000 of the population, the rates varying from 0.5 in Limerick and in Wexford to 2.3 in Tralee, the 144 deaths from all causes for that district including 6 from enteric fever, 6 from whooping cough, and 12 from diarrhoeal diseases. The 1,386 deaths from all causes for Cork include 2 from enteric fever, 81 from whooping cough, 12 from diphtheria and 11 from diarrhœal diseases.

PULMONARY TUBERCULOSIS.—The rate represented by the deaths from pulmonary tuberculosis for the 12 towns in the aggregate was 1.51 per 1,000 of the estimated population; for the Dublin Registration Area it was 1.39 per 1,000; and for the urban districts collectively (not including Dublin Registration Area), it was 1.72.

<sup>\*</sup> Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhœal diseases. The rate for Dublin City was 1.53 per 1,000.

### DUBLIN REGISTRATION AREA.

BIRTHS.—The number of births registered in the Dublin Registration Area during the year 1924 (53 weeks), was 12,166—6,216 boys and 5,950 girls—or 27.5 per 1,000 of the estimated population of the Registration Area, which consists of the city of Dublin and the urban districts of Rathmines, and Rathgar, Pembroke, Blackrock, and Dún Laoghaire. The average rate for the preceding ten years was 26.0 per 1,000 of the mean population\* of those years.

Of the 12,166 births, 9,187 belonged to the city, affording a rate of 27.1 per 1,000 of the estimated population, and 2,102 to the urban districts named above, equivalent to 20·3 per 1,000, and there were 877 births of infants whose mothers were admitted to institutions from localities outside the Registration Area. Allowing for the exclusion of the latter, the birth rate for the entire Area in 1924 was 25.5 per 1,000 of the population.

Of the 12,166 births 2,937 were registered during the first quarter, 3,063 in the second, 3,241 in the third, and 2,925 in the fourth.

DEATHS.—The number of deaths appertaining to the Dublin Registration Area during the year 1924 was 6,984, equivalent to 15.8 per 1,000 of the population of the Area, estimated to the middle of the year 1924. The average death-rate for the 10 years, 1914-23, was 19·2 per 1,000. Thus the rate for last year is 3·4 per 1,000 below the average.

The total number of deaths registered during the year, namely, 7,693 (3,781 males and 3,912 females), including the deaths of 709 persons admitted to institutions from localities outside the Area, is equal to 17.4 per 1,000 of the estimated population. The average rate for all the deaths registered during the preceding 10 years was 20.8 per 1,000.

The rate for the City of Dublin was 16.2 per 1,000, and for the urban districts 14.5per 1,000. The rates for the several districts† range from 10.5 for New Kilmainham to 20:0 for the district of North City No. 2.

Of the 7,693 deaths in the entire Area, 2,622 were registered during the first quarter of the year, 1,746 in the second, 1,456 in the third, and 1,869 in the fourth, the weekly average being 145.

### Causes of Death.

The records of last year show that the total number of deaths from the principal epidemic diseases appertaining to the Dublin Registration Area was 463, affording a rate of 1.05 per 1,000 of the estimated population, as compared with an average of 669 deaths and a rate of 1.63 per 1,000 for the ten years, 1914-23. (See Table 2.)

Deaths from *enteric fever* numbered 8, or 16 under the average for the preceding 10 years; deaths from typhus, nil, the average being 2; deaths from measles, 115, or 15 below the average; deaths from scarlet fever, 19, or 3 below the average; deaths from whooping cough, 24, or 84 below the average; deaths from diphtheria, 43, the average also being 43; deaths from influenza, 294, or 2 below the average; deaths from dysentery, nil, the average being 7; deaths from diarrhæa and enteritis of children under 2 years of age amounted to 248, being 71 below the average; deaths from tuberculosis numbered 762 (pulmonary, 614, other forms, 148), equivalent to a rate of 1.73 per 1,000 of the population, and were 383 (or more than 33 per cent.) below the average for the preceding 10 years; cancer caused 474 deaths, or 47 above the average, the rate per 1,000 of the population being 1.07; deaths from pneumonia numbered 771 (broncho-pneumonia, 511, lobar, 66, and pneumonia, type not distinguished, 194), being 70 more than the average, and affording an annual rate of 1.74 per 1,000 of the population; other respiratory diseases caused 817 deaths (including 686 from bronchitis), or 205 below the average, the rate per 1,000 of the population being 1.85.

Deaths caused by violence numbered 141 (including 4 due to homicide and 10 to suicide) being 83 below the average for the 10 years preceding.

<sup>\*</sup> See Note (\*) on page 103.

† The death-rates referring to the several Dublin districts have been calculated on the mortality for the respective districts as corrected by the distribution of deaths in public institutions according to the localities from which the deceased persons were admitted (Table 3).

‡ See Note (\*) on page 97.

From Table 3, page 104, it will be seen that the annual rate represented by the mortality from the principal epidemic diseases\* in the City of Dublin was 1.2 per 1,000, and in the urban districts 0.6, the rates for several districts varying from 0.2 for Clontarf and Howth No. 1, part of, and for Blackrock to 2.0 for North City, No. 1 East, the 637 deaths from all causes for that district including 23 from measles, one from scarlet fever, 2 from whooping-cough, 4 from diphtheria, and 35 from diarrhœal diseases.

### AGES AT DEATH.

Of the 6,984 deaths belonging to the Dublin Registration Area during the year, 1,920 or 27.5 per cent., were those of children aged 5 years of age, and 1,919, or 27.5 per cent., were those of persons under 65 years and upwards, including the deaths of 862 persons aged 75 years and upwards, of whom 46 were stated to be nonagenarians.

The rate represented by deaths of children aged one and under 5 years during the year 1924 was 18.0 per 1,000 of the population at this age-period, as compared with an average of 23.7 for the 10 preceding years; the rate per 1,000 for deaths of children aged 5 and under 15 years for 1924 was 2.4, and the average for the preceding 10 years, 4.5; for deaths of persons between 15 and 25 years, the rate per 1,000 in 1924 was 4.2, the average rate for the preceding ten years being 5.5; among persons aged 25 and under 45 years, the death rate in 1924 was 6.2 per 1,000 of the population at these ages, as against an average of 9.2 per 1,000 for the preceding ten years; the rate for deaths in 1924 of persons between 45 and 65 years was 26·3, as compared with an average of 29·1; deaths of persons aged 65 years and upwards in 1924 were represented by a rate of 76.9 per 1,000, the corresponding average rate for the ten preceding years being 85·1 per 1,000.

### INFANT MORTALITY.

For the Dublin Registration Area, the infant mortality rate (deaths of infants under one year of age per 1,000 births) in the year 1924 was 113. In 1923 it was 111, as compared with 116 in 1922, and 134 in 1921, and an average of 140 for the nine years 1915-1923. (See Table 2.)

In 1924, the infant mortality rate for the City of Dublin was 119 per 1,000; for Rathmines and Rathgar urban district, 90; for Pembroke, 84; for Blackrock,

92; and for Dún Laoghaire, 88.

### DEATHS IN PUBLIC INSTITUTIONS.

Of the 6,984 deaths, 2,739, or 39.2 per cent. occurred in public institutions, viz., 1,885 in the various hospitals, prisons, and lunatic asylums, 827 in the Dublin union workhouse, and 27 (those of persons admitted from the Dublin Registration Area) in the Rathdown union workhouse.

### ENGLAND AND SCOTLAND.

During the year 1924 the births in London were equivalent to a rate of 18.7 per 1,000 of the population; in Glasgow the birth-rate was 24·7 per 1,000, and in Edinburgh, 20·7 per 1,000.

The deaths among civilians in London during the same period were equivalent to an annual rate of mortality of 12·1 in every 1,000 of the civil population; in Glasgow the death-rate was 16.3 per 1,000 of the total population, and in Edinburgh the annual rate was 14.9 per 1,000.

# URBAN DISTRICTS, 1924.

in the Dublin Registration Area, and in the Provincial Urban Areas of Saorstat Éireann (exclusive of Births and Deaths in Public Institutions relating to persons admitted from other Districts), the number of deaths from each of the Principal Evidence Diseases t, from Tuberculous Disease, from Cancer, and from Violence, and the number of Uncertified Deaths, with similar particulars regarding Belfast and Londonderry. TABLE 1.—BIRTHS and DEATHS registered during the VEAR 1924,

Nore.—"The Dublin Registration Area" consists of the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock and Dun Laoghaire.

The details for it and for each of the Urban Districts marked thus (\*) in the following table have been compiled from the Weekly Returns furnished by the Registrars and relate to the fifty-three weeks ended Saturday, 3rd January, 1925.

|               |  |           | pəyj   | No. of Uncert  | 12,759                 | 11,975                | 784                   | 406                                   | 112                 | 93             | 4040  | 113 5 113   |

\* The rates for the years 1914-1917 and 1919-1924 are calculated on the population estimated to the middle of the respective years; those for 1918 on the estimated population in the middle of 1917.

† The numbers for the years 1914, 1919 and 1924 embrace the returns for 53 weeks. This arrangement is occasionally necessary in order that the annual series may correspond with the calendar year.

† Rate per 1,000 births,

(a) For 52 weeks only. (b) For 9 years only.

TABLE 3.—Showing for the year 1924 (53 weeks) the number of DEATHS of Residents of the several REGISTRAR'S DISTRICTS in the DUBLIN REGISTRATION AREA, and in the CITY OF CORK, the annual rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseasest; with the Mortality from some of the principal causes; also the Deaths at certain age periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

The populations given for the City of Cork and its component parts are those according to the Census for 1911.

### NOTIFICATIONS OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," and the "Tuberculosis Prevention (Ireland) Act, 1908," as furnished by the respective sanitary authorities, are set forth in the following table:—

Table 4.—Showing the Number of Cases of Infectious Diseases notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire), and in the Cities of Cork, Limerick, and Waterford, during the year 1924 (53 weeks). A dash (—) denotes that the disease in question is not notifiable in the district.
